

Masters of mixing since 1993

Limitech in short

- 25 years of experience
- 30 employees under the same roof, where all our functions from sales to production are taking place.
- 500 projects done
- Export to EU, Asia, Africa and Americas
- Unique mixing technology, all the way to 1 micron
- Our expertise and focus is mainly on
 - Mayonnaise & Dressing
 - Soups, Sauces & Ready Meals
 - Jams & Marmelades
 - Processed Cheese

MyMix

Variants: MyMix

Capacities

MyMix: 10L

Features:

- Mixing wheel, stator, knife
- Start/stop mixer
- Agitator with frequency inverter
- Lifiable lid
- Vacuum
- Cooling in jacket
- Spray balls (CIP)
- Direct and indirect steam + insulation
- Frequency inverter on mixer
- PLC
- Inlet for water in lid
- Mounted funnel

The MyMix is Limitech's 10L lab mixer.

The small 10 l mixer gives the exact same output as a 3000 l mixer, so when you get your perfect test result you can go directly to large scale production. The mixer is fully scalable which means you can test and run full scale production on similar machines.

The lab mixer is perfect for the following solutions:

Prepared foods, Preserves, Dairy, Cheese, Sauces, Spreads, Ice Cream, Desserts, Health Care, Confectionary etc.

P-Series

P-Series are process mixers and equipped with mixing wheel and Agitator. The difference between the 4 variants is lid design, and vessel Size. The size of vessels corresponds to the intended use of each variant On the next page you can find the end products and corresponding P-Series mixers

Variants: P1, P2, P3 & P4

Capacities

P1: 300 - 1500L

P2: 300 - 2000L

P3: 100 – 1000L

P4: 10 - 300L

Individual features:

P1: Welded lid with man-way hatch, vacuum, Cooling in jacket & spray balls.

P2: Welded lid with man-way hatch & spray balls (CIP).

P3: Hinged Lid.

P4: Liftable lid, vacuum, cooling in jacket, spray balls (CIP)

S-Series

Variants: S1, S2 & S3

Capacities

S1: 500 - 6000L

S2: 50 - 6000L

S3: 200 – 500L

Individual features:

S1: Welded lid with man-way hatch, vacuum, spray balls (CIP ready)

S2: Welded lid with man-way hatch & spray balls (CIP ready).

S3: Hinged Lid.

S-Series are mixers intended for dissolving and are equipped with Mixing wheel only. The difference between the 3 variants is lid design And size of the vessel. The size of vessels corresponds to the intended use of each variant

On the next page you can find the end products and corresponding S-Series mixers

SIF In-Line

Variants: SIF In-Line

Processing parameters:

Final Products: 12.000 L/h

Min. Circulation: 16.000 L/h

Viscosity app. 500 cP

Standard features: High Shear mixer with water flushed seal, motor frame with 4 adjustable legs, motor and V-belt drive, powder funnel, connections; clamp and sms, internal surface finish $Ra \leq 0,8 \mu m$

Food industry applications:

Incorporation of stabilizing agents

Incorporation of milk powder

Soft drinks preparation

Our SIF In-Line mixer is specially designed to give you a quick and efficient blend of dry and liquid ingredients by recirculation. To avoid "fish-eyes" or lumps in the product the dry and wet ingredients are kept separate until meeting in the mixing chamber.

Mixing wheel

How

Mixing wheel is positioned in an angle in bottom of the vessel

Advantages

- Product can be pumped out at the lowest point without having to go through the mixer causing damage to particles
- Increasing the mixing effect

The agitator

How

The agitators gently blends and scrapes the sides of the vessel

Advantages

- Equal distribution of heat and cooling
- Equipped with a frequency inverter to give variable control of speed
- Designed not to destroy particles

[Back to technology overview](#)

Direct heating

Functionality

Direct injection of food quality steam in to the product

Advantages

- Rapidly heats the product and allows for a faster batch time
- Does not burn the sides
 - Less cleaning
 - No after taste

To consider

It adds water in to the product, which has to be accounted for in to recipe

[Back to technology overview](#)

Indirect heating

Functionality

Steam heats through the dimple jacket around the tank.

Advantages

- Does not add water in to the product making it easier to control recipes
- Less expensive steam can be used

To consider

Keeping good agitation to lessen any burns on the side of the vessel

[Back to technology overview](#)

Indirect cooling

Functionality

Ice water runs through the dimple jacket around the tank.

Advantages

- Cools and cooks in the same tank
- Less expensive than a surface scrape heat exchanger

[Back to technology overview](#)

Vacuum

Functionality

Vacuum system mounted directly on the mixer

Advantages

- Ability to boil under vacuum at lower temperature
 - Making it easier to ensure no burn / after taste
- Dry ingredients will be fed in from the bottom
 - Mixes immediately
 - Less risk of lumps/"fish eyes"
- Derates and sucks air from the product
 - Less air in end product – easier to bottle
 - No additional de-aerator needed
- Rapid cooling
 - Using vacuum and cooling simultaneously will reduce cooling time significantly

[Back to technology overview](#)

Vacuum Condensing

Vacuum Condensing - highlights:

- The system can maintain high vacuum level even at increasing temperature in processing tank
- Cooking & Frying at lower temperature (60-85°C) resulting in better product quality and color
- Faster cooling process by means of Vacuum condenser system

How does vacuum condensing work?

CIP system

Functionality

CIP Quick flush sprayballs located inside the vessel – enabling a cleaning time of maximum 10 min.

Advantages

- Cleans the vessel within any operator interference
- Faster cleaning for a higher mixer output
